

California Conservation Corps & Certified Local Corps

Water Bond-Prop 1 – Chapter 6

Restoration & Ecosystem Protection-Examples of Corps Work

- ◆ Fisheries restoration: modify barriers for fish passage, reduce upslope sediment sources, install sediment catch basins, waddles, other erosion control measures and planting), stabilize stream banks through bioengineering and log/boulder structures, build or repair livestock exclusion fences, construct in-stream habitat structures for pool development and spawning gravel retention, install logs and root wads that serve as cover structures in pool and flat water habitats
- ◆ Fish stocking and hatchery work, fish surveys and tagging for study
- ◆ Wetland restoration: Arundo and pampas grass removal, native vegetation, trail re-routing
- ◆ Silt and fish barrier removal
- ◆ Stream bank stabilization: install gabions and other structures
- ◆ Erosion control: Silt fencing, jute netting, waddle installation
- ◆ Monitoring: fish populations, stream flow, water quality
- ◆ Native species reintroduction: seed gathering, plant propagation, planting, weed removal, establishment watering, broadcast planting of native grasses
- ◆ Non-native plant removal: hand removal, use of chainsaws, brush cutters, burning (at some locations), chipping, herbicide application
- ◆ Nursery work for native planting and restoration projects
- ◆ Tree planting and establishment watering
- ◆ Scrub Oak Restoration: collect oak acorns, install tree cages and tree shelters
- ◆ Forest Health: slash removal, fire hazard reduction, thin dead standing forest
- ◆ Dune and desert restoration: install fencing for habitat protection and to restrict OHV use; transplant native vegetation to repair OHV damaged areas
- ◆ Meadow restoration: re-vegetation and rehabilitation to restore natural state, trail re-routing
- ◆ Grasslands: ammobhilla (European grass), canary reed, eel grass, and other invasive removal
